

Explore Your Solar Power Potential!

First...

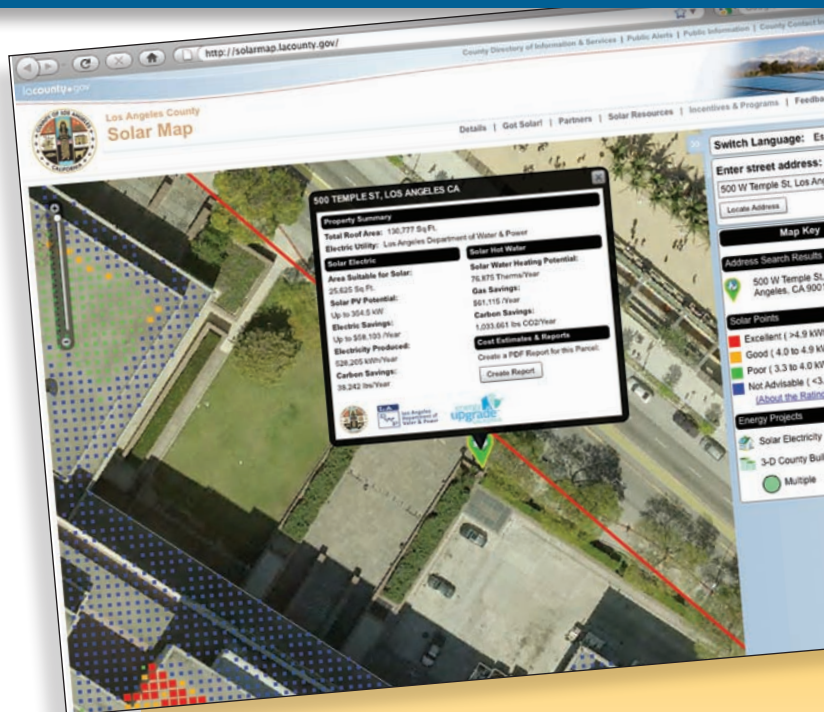

Seal and insulate your home to reduce your energy use. **Then, go for solar!** You'll need fewer panels—which means a less expensive system.

Go to solarmap.lacounty.gov

where LA County's Solar Map will allow you to quickly find out whether solar panels on your home or business could help you save money—and the environment.

Type in your address and the Solar Map's advanced solar engineering model will find your:

- Total roof area
- Potential system size to install
- Electricity production per year
- Electricity savings per year
- Carbon reduction per year
- Rebates from utility companies
- Solar installers
- Nearby solar installations and case studies

Then...

Take advantage of the **sizzling summer incentives** from Energy Upgrade California™ and you can **get up to \$6,000** to upgrade your home's energy efficiency (through Labor Day, 2011), and layer your solar rebate on top! See how at EnergyUpgradeCA.org today!
